

Research Centre for Human Adaptation in the Arctic

Research Centre was established in 2015 as a result of integration of the Science Department and the clinical subdivision – the hospital attached to the KSC RAS. The objective and the subject of the Centre's activity are to organize and carry out pure, search and applied researches, to put the scientific developments and advanced experience to use, and to apply new knowledge obtained from biological, physiological and medical sciences.

Study of special functioning of the main systems of organism, of physical and psychic development of a human being under the arctic conditions

Revealing socially significant diseases among the population of the Euro-Arctic region, study of epidemiological peculiarities

Clinical Department, RC MBP

The staff of the Clinical Department includes highly qualified physicians, doctor's assistants and nurses at the hospital and polyclinics.

The operating-room of the surgery division is equipped with up-to-date equipment and is one of the best ones in Murmansk region.

The hospital and the operating-room are equipped with the up-to-date apparatus used in diagnosis, operations and anesthesiology.

Researches are carried out at the up-to-date clinical-and-diagnostic laboratory, polyclinic, and the day-time and twenty-four-hour hospital.

In July 2017, a new field of activity - **international cooperation and innovations** was initiated.

The cooperation geography

The states of the Euro-Arctic region

The states with similar extreme zoning

The states aimed at cooperation in the Arctic

Basic areas

Cooperation development in fundamental and applied researches in the field of biological, medical and nature-prototype technologies in the Arctic.

Entry into information-and-communication space.

Joint programs and projects with the governmental organizations and industrial partners.
